

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application.

15. (currently amended) A communication apparatus, comprising:

a communication device for receiving an identification signal from an originating communication apparatus, and performing an output operation when the received identification signal from the originating communication apparatus coincides with a pre-stored identification signal,

wherein said output operation includes an operation of repeatedly printing a plurality of ~~groups~~ of copies of an image data signal representing the entire document being received into a plurality of groups subsequent to the receipt of said identification signal on recording sheets .

16. (previously presented) The communication apparatus according to claim 15, wherein a process of bundling each group of copies one by one is performed after said output operation.
